ESTADISTICA GANADERA

RESULTADO DE LA ENCUESTA CENSAL

DEL 30 DE SETIEMBRE DE 1942

EXISTENCIA DE:

VACUNOS,
LANARES,
PORCINOS
CABALLOS

CIFRAS REAJUSTADAS
diciembre de 1943.

PROHIBIDO FOTOCOPIAR
(Material Histórico)

8.2
 1942 2

En el presente fascículo se insertan las cifras reajustadas correspondientes a la existencia ganadera al de setiembre de 1942, en los partidos y departamentos de la República, en base a las declaraciones de 427 productores agropecuarios. Dichas cifras, si bien modifican las que con carácter provisorio fueron dadas conocer por esta Dirección en el folleto publicado a fines de febrero de 1943, no difieren fundamentalmente en sus resultados generales, confirmándose, prácticamente, los grandes totales consignados en aquella oportunidad. El reajuste efectuado ha sido necesario con el fin de reemplazar las cifras que se habían calculado para aquellos productores que no remitieron su información en tiempo oportuno, por las declaradas posteriormente por ellos mismos.

La Dirección de Economía Rural y Estadística ha dado término a la información obtenida en la encuesta censal levantada con el día 30 de setiembre de 1942. La estadística ha sido realizada, por partidos y departamentos, habiéndose efectuado el censo principalmente por vía postal, pero, en los departamentos que no permitió obtener información útil, como así también en los productores remisos en el cumplimiento del mismo, por medio de cuestionarios o de sus finalidades, se hizo un censo por muestra. A este respecto debe mencionarse la colaboración que en los anteriores, han prestado las autoridades municipales y las sociedades rurales de la Patagonia, que en el presente censo tropieza con las dificultades que existen en aquellos vastos territorios.

La información con que fué aportada en general, en virtud de la amplia comprensión con que se cumplió con las disposiciones de la ley del

censo ganadero, se insertan a continuación los resultados de los censos comparados en forma comparativa para las especies censadas.

DIFERENCIAS DE 1942 con:

- (1) Incluido centros urbanos, cuya cifra se ha prorrateado entre las distintas clasificaciones.
- (2) Cifras sin discriminar que no permiten efectuar comparaciones.
- (3) Las cifras anotadas representan la diferencia entre las existencias registradas en 1942 al compararas con las de los censos anteriores.

En lo referente al total de hembras las cifras definitivas de 1942, en relación con las del cálculo previo hecho en febrero, arrojan una ligera diferencia. En efecto, la disminución con respecto de 1937, que en dicho cálculo fué estimada en 1.454.532 cabezas, resulta, en definitiva, de 1.614.114 cabezas, siendo por consiguiente de 159.582 cabezas o sea del 0,7 % la diferencia entre las dos estimaciones de disminución en comparación con el total de 22.555.607 hembras que había en 1937. Como puede observarse en el cuadro precedente, la proporción de hembras en el total de la especie, si bien inferior a la de 1937, supera la de los años 1930, 1922 y 1914.
